
Orr Rozov Biography 2013

Orr is a second-year student at Virginia-Maryland, pursuing a combined DVM-MPH. After graduating from Carnegie Mellon in 2010, she completed a 2-year research fellowship at the NIH in the National Institute of Allergy and Infectious Disease in the Laboratory of Immunogenetics. She studied the role of G-protein coupled receptor signaling in chemotaxis. This summer, she interned at the California Animal Health and Food Safety Lab in Tulare, CA, where she learned about diagnostic pathology, food safety, and disease surveillance and where she probably spent too much time worrying about getting Crypto. Right now, Orr is interested in diagnostic pathology, regulatory medicine, research, epidemiology, public health policy, zoonoses, food security, food safety, and more. At school, Orr is active in a number of clubs and serves as an officer in the Public Veterinary Practice Club and as Vice President of the Pathology Club. She is excited to have the opportunity to connect with veterinarians working in so many specialties in a setting like the USAHA-AAVLD annual meeting that allows for productive discourse.
